

JR. FIRST LEGO LEAGUE

**Investigate science and
technology using Legos!**

Jr. FIRST Lego League, for students ages 6-9, offers students the chance to investigate and explore issues of modern real-world problems through Lego building blocks. In this summer edition of Jr.FLL, students will learn all about energy: how are the things we use every day powered? Where does that energy come from? As a final product of participants' investigations, they will build a Lego model showing how energy gets to their classroom and design a poster detailing their research!

This camp is free for participants, but students must be dropped off and picked up on time each day. For more information, contact your school's main office or NC RESA.

9:00 am - 12:00 pm
August 3-7
Ages 6-9
